

Vladyslav Hontar

Software Engineer — Java · Rust · Distributed Systems

+353 83 080 6274 | hontarvladie@gmail.com | Athlone, Ireland | [portfolio](#) | [github](#)

SKILLS

JAVA / SPRING | Spring Boot • JPA / Hibernate • microservices • REST • JUnit • Mockito • MySQL • PostgreSQL

RUST | Tokio • thread-to-core pinning • cache-conscious data layout • low-latency services

NETWORKING | TCP / UDP • RTMP and SRT implemented from scratch in C/C++ • packet-loss recovery and latency budgeting • MPEG-TS • ZeroMQ • adaptive bitrate control

BLOCKCHAIN | Solana internals (validators, Turbine, leader schedule, MEV) • Anchor • CPIs • compute-unit optimisation • Solidity (basic)

INFRASTRUCTURE | Linux • Docker • Git • GitLab CI • ZeroMQ • AWS SQS / Secrets Manager

ADDITIONAL | TypeScript / JavaScript (backend APIs, dashboards) • C++ (ESP32 / Arduino, sensors + REST APIs)

EXPERIENCE

OSAMBIT | *Rust, Java, ZeroMQ, AWS, GitLab CI*

Software Engineer (Blockchain) & Technical Consultant | Aug 2025 – Present, Remote

- Profiled and cut latency across the execution path — e.g. replacing AWS SQS with ZeroMQ between co-located services took messaging from 70–140 ms to 1–3 ms.
- Built and maintained low-latency automation infrastructure for DeFi/MEV strategies, landing transactions inside the first slot (under 400 ms end to end).
- Owned architecture on client engagements alongside delivery work — requirements, system design, and cost and timeline estimates — from first technical call through to delivery.
- Authored system designs in PlantUML during RFQ and design phases, giving non-engineering stakeholders a shared view of complex distributed systems.
- Ran deployments on GitLab CI; delivered in Agile sprints with Jira planning and story-point estimation.

EQUI LABS | *Rust, Anchor, Java, Spring Boot*

Solana Blockchain Developer | May 2024 – Sep 2025, 3-person startup

- Built the backend and a real-time indexer tracking Solana DEX pool rates; shared ownership of system architecture.
- Cut compute-unit usage 10–20% on an already-lean Anchor program — fewer algorithmic steps plus tighter integer widths (u8 where sufficient) to shrink stack allocation.
- Engineered a Java/Spring Boot observability service aggregating real-time performance and health metrics.
- Shipped a reactive MEV bot that ran unattended in production for several months, until larger competitors eroded the strategy's edge.

SKLO | *Team coordination, micro-soldering*

Hardware Technician → Service Center Coordinator | May 2021 – Mar 2022

- Refurbished iPhone screens end to end — glass separation, backlight and touch-IC soldering — then promoted to coordinator: allocated daily work across a 7-person team, costed every repair and kept parts accounting.

COMMUNITY

SUPERTEAM IRELAND | member of the Irish chapter of an international developer community — build events and technical meetups.

EDUCATION

TECHNOLOGICAL UNIVERSITY OF THE SHANNON

M.Sc., Software Design with AI for Cloud Computing (Level 9, in progress)

2026 – 2027 | Athlone Campus, Ireland

B.Sc. (Hons), Software Design with AI for Cloud Computing (NFQ Level 8)

2025 – 2026 | Athlone Campus, Ireland

Second Class Honours Grade 1 (2:1) · award GPA 66.41%

B.Eng., Computer Engineering (NFQ Level 7)

2022 – 2025 | Athlone Campus, Ireland

Pass with Merit – Grade 1 (equivalent to 2:1 honours) · final-year award GPA 70.72%

KYIV COLLEGE OF COMMUNICATION

Higher Certificate, Network Technologies & Telecoms

2019 – 2023 | Kyiv, Ukraine

PROJECTS

DLMM DEX | *Solidity, solo*

Q1 2026

Concentrated-liquidity (DLMM) exchange on the Robinhood testnet chain.

github.com/VladyslavHontar/robin

PLOHOYSTREAM | *Kotlin, C/C++, Android*

2026 – present

Live-streaming app with the transport stack written by hand: RTMP/RTMPS handshake, chunking, AMF0 and FLV, MPEG-TS muxing, and SRT over UDP with loss recovery and a latency budget. Adaptive bitrate driven by live link statistics.

github.com/VladyslavHontar/BadStream

SOLANA ARB BOT | *TypeScript → Rust*

Q2 2024 – Q1 2026

Monitors the chain and submits arbitrage transactions when an opportunity appears; ran profitably for months. Rewritten in Rust for compile-time guarantees and C-level speed.

SOLANA AGGREGATOR | *Rust, 3-person team*

Q1–Q2 2025 · Solana Breakout Hackathon

Swap site with its own indexer and routing engine, redistributing arbitrage profit to the user who created the opportunity; shipped inside the competition window.

CERTIFICATIONS

GOOGLE CLOUD | Cloud SQL • BigQuery • Looker • Project Manager

CISCO NETWORKING ACADEMY | networking fundamentals
